Anaplan-MuleSoft Connector

As a cloud-native, enterprise-grade Connected Planning and performance management platform, Anaplan offers many data integration options, one of which is through the Anaplan-MuleSoft connector. Together, they enable the data import, export, and process orchestration with any on-premise and SaaS application, database, or system to Anaplan.

Anaplan and MuleSoft enable IT and developers to keep up with the speed of business. Today's enterprises need to stay agile, deliver faster, and make the most of their IT investments. MuleSoft builds data networks: seamless frameworks of data sources and devices connected by APIs, whether on-premises or in the cloud. These data networks speed up the cycle for Anaplan customers when developing, testing, launching, monitoring, and applying modifications - making it easier to secure and manage data access, and, ultimately, enable companies to do more—faster—with less.

The third-generation Anaplan connector brings to market valuable new features—certificate-based authentication, higher performance, and scaling through chunked file transfers and data streaming, data previewing, automatic retries, and automated process success reporting. Leverage your IT's investment in the Anaplan-MuleSoft Connector to connect all your enterprise data sources with Anaplan and accelerate your Connected Planning journey.

Anaplan and MuleSoft join forces to offer a comprehensive data integration solution for a cloud-based enterprise planning and performance management platform. The Anaplan-MuleSoft integration seamlessly brings in data from any source in just a few clicks to expedite your access to internal operational and transactional data needed for enterprise planning. Leverage MuleSoft's industry-leading ESB solutions to easily integrate with hundreds of cloud and on-premise data sources and applications. Build your plans and manage enterprise-wide performance initiatives effectively with the latest information as you easily access and process planning data through Anaplan's intuitive interface.

Key benefits of Anaplan-MuleSoft integration:

- Supports a wide range of data integration scenarios and enables you to integrate SaaS and on-premise sources with Anaplan. The Anaplan-MuleSoft Connector can handle data mapping, security, import, export, synchronization, replication, and monitoring.

- Offers out-of-the-box integration for apps, including Salesforce.com, NetSuite, Workday, Amazon Redshift, Microsoft Azure, Marketo, SAP, Oracle, SQL Server, and lots more.

- Simplifies data integration with the complete functionality of MuleSoft—whether Anaplan is the source or target of the data integrations. MuleSoft enables developers to easily design, build, and manage for data integration and flows to Anaplan with a lower cost of ownership.

- Increases data security, consistency, and governance that can be driven by IT using one market leading ETL platform across your enterprise.

- Greater flexibility and execution speed for data connectivity, transformations, and processing to support the business planning needs using the feature-rich Anaplan-MuleSoft Connector.

"This partnership and Anaplan's release of a MuleSoft Certified Connector, will enable our mutual customers to gain competitive advantage by launching new applications faster, reducing deployment times, and eliminating time spent on complicated integration projects. Technology partner integrations with MuleSoft and the resulting application network simplify connectivity and eliminate silos of data within both small and large organizations."

- Brian Miller, Vice President of Business Development, MuleSoft.

Anaplan

About the Anaplan platform

Enable any user in an organization to leverage data-driven analytics

Anaplan streamlines the process of data discovery. Using data that's processed in real time, you can create models that reveal your company's project status in real-time: "what-if" propositions can be considered and reviewed to help make better decisions, and even large data sets can be used to collaborate, visualize possible scenarios, and dynamically course-correct to respond to an active market.

Modern cloud platform for enterprise-scale planning

Leverage the platform to coordinate all planning and decision-making efforts across all lines of business, including finance, sales, supply chain and operations, marketing, HR, and IT. Ensure high adoption and planning automation as you roll out changes in a real-time, cloud-based environment to all business users.

Trust your data by aggregating and curating all sources

A single cloud-based platform saves time and effort when you align the data across different models and in your plans. You can centralize data from transactional source systems in an Anaplan Data Hub to make a plan throughout the enterprise, and then roll out changes in your data to your production environment. You can be confident that you're using high-quality data to create an accurate picture of the business. Choose from a variety of integration options, including:

- Anaplan Connect for self-service data import and export

- Anaplan HyperConnect for integrating on-premise and cloud applications which includes prebuilt connectors to hundreds of data sources, including Salesforce, Workday, NetSuite, Oracle, and SAP

- Anaplan connectors for use with leading ETL vendors including MuleSoft, Dell Boomi, Informatica, and SnapLogic

- Custom integration using the Anaplan REST API for designing constraints and security into the architecture itself

Drive business decisions with real-time analytics

Quickly assess the health of your business with role-based, built-in dashboards and analytics for at-a-glance insights (charts, graphs, maps, waterfalls, and more). Obtain complete, integrated, real-time financial reporting (P&L, balance sheet, cash flow, etc.) across plans, actuals, and forecasts. Pivot reports by any dimension (time, geography, or product) for custom views on-the-fly.

Enable better decision-making with a self-service UI for modeling, analysis, and "what-if" scenarios

A flexible, intuitive, and iterative modeling process enables business users to create complex models and "what-if" scenarios on-the-fly. Using data from across the business, you can see what's happening now and project into the future. The robust platform provides the foundation for users in different parts of the organization to collaborate and gain insights for faster decision-making.

Use smart analytics to gain deeper insights

Access trusted, clean, and relevant data to make the right business decisions. Scale up or drill down into data while modeling and planning. Identify key trends and patterns to gather insights using the platform's visualization environment. Enable data discovery to drive a strong culture of analytics.

Security and compliance

Understand where data originates, how it's shared, and when it's changed or updated in every stage of the data journey. Audit, secure, and support compliance requirements to gain confidence in the strength and integrity of data insights.

Scalability provides granular insight

Only Anaplan offers scalable in-memory technology able to handle large amounts of data in one model and update all information across your models in less than a second. You'll view the results in an easy-to-comprehend visual graphic that you choose.

Install Anaplan-MuleSoft Connector now

Download and install the v3 Anaplan connector from the MuleSoft Anypoint Exchange. [Download here](#).

It's that simple.
